

MORAVIA BLACK BULL RAISED COLLISION PROTECTION BARS

DESCRIPTION

The Black Bull Raised Collision Protection Bars are made from high quality thick walled steel tubes, powder coated high visibility yellow. Designed for indoor use, the bars help to repel dangerous warehouse traffic from pedestrians, racks, or machinery.

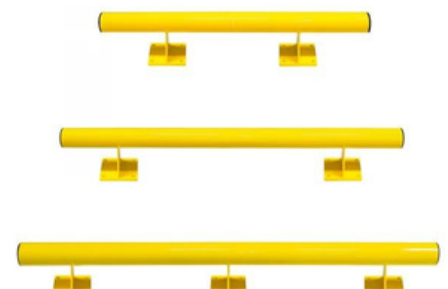

The collision bars come with fully welded joints and base plates for ultimate strength and reliability.

The bars are modular and can be joined together to suit any area, including corner areas.

The raised design of the bars makes them highly noticeable and the tough design should be enough to deter work vehicles from proceeding into that area. The bars can be bolted to the floor or low down on a wall if needed.

FEATURES

- ✓ High quality steel tube design
- ✓ Powder coated yellow
- ✓ Suitable for use around forklifts and machinery
- ✓ Integrated hose conduit
- ✓ Fully welded joints and base plates

FIXINGS
M12 x 110mm
throughbolt anchors
